[Linkedin.com/in/tan-tse-hao](https://www.linkedin.com/in/tan-tse-hao)

Curious by nature with an analytical mindset and a hunger to learn. Motivated to excel and always on the lookout for a better solution. Effective communicator with clients and colleagues alike with a proven track record of receiving consistent positive feedback.

## EXPERIENCE

### Guidewire Software, Malaysia – Software Developer Consultant

NOVEMBER 2021 - PRESENT

- Currently serving as the technical configuration lead on an implementation project for one of the largest reinsurance companies in the world after developing a broad and in-depth knowledge of a complex Policy Administration System software in <1 year of being assigned and winning the client's trust
- Independently developed complex high-value features and swiftly resolved long-standing high-priority defects while guiding the customer to ensure business requirement alignment, resulting in consistent positive feedback across all project stakeholders over a period of >1 year
- Executed major codebase refactors to minimise pre-existing technical debt – increasing simplicity of API usage, ease of code maintenance, and code performance
- Mentored client and colleague developers on coding patterns, version control, and product knowledge via peer review and knowledge transfer sessions to ensure the propagation of a healthy and sustainable software engineering culture

### NielsenIQ, Malaysia – Client Service Executive

MARCH 2020 - OCTOBER 2021

- Analysed/visualised retail data at varying levels of granularity to produce insights for clients to understand market trends and grow their categories
- Led the process of scoping client requirements and feasibility of delivery to achieve closure of deals worth ~204k USD in a complex sales environment over the course of less than a year

### UsideU, Tokyo – Data Science Associate (Internship)

OCTOBER 2019 - DECEMBER 2019

- Developed a pipeline in Python for the generation of synthetic faces by blending facial features of selected key target faces using a neural network encoder and Nvidia's StyleGAN architecture for a product feature within 2–3 months

### Monash University Malaysia – Research Assistant

JANUARY 2019 - FEBRUARY 2019

- Constructed a scaled-down model of an intelligent transport system in 2 months
- Programmed line-following robots in C++, a vehicle positioning camera program in Python, and an IoT system for inter-vehicular communication to navigate routes and avoid collisions with each other

## EDUCATION

### Monash University Malaysia, Bachelor of Mechatronics Engineering (Honours)

OCTOBER 2015 - JUNE 2019

GPA/CGPA: 4.0 out of 4.0 | WAM: 88.138

## SKILLS

### Programming

Experienced in:

Java, Gosu, Git, Object-Oriented Programming (OOP) principles
